

See Screen 1 (render the HTML in the browser before doing anything)
Create the correct subdirectory structure for images and css
Add the files to the correct subdirectories

IN HTML FILE:

- Create the element that will include the css file correctly
- Add an INLINE style attribute to the article (element) tag that is the parent of the unordered list so that all of the text is red (yes an inline style is “bad”)

Create your stylesheet (put it in the correct subdirectory!). Make sure to create these rules, with their properties in this exact order. Add nothing else! Double check against the screen prints.

Create a type level rule for the body. Give the body a width of 1100 pixels, and center it on the page. The background color should be #f9fcfe and the text should be dark blue.

Create an id rule for the section and name the rule sectionrule. In that rule, the section should be 1000 pixels wide. Place the id attribute on the correct element in your HTML.

Create a type level rule for the header and make it 160 pixels tall.

Create a type level rule for the navigation element. Use the image starsmall.jpg for the background, repeat it in the x direction and position it from the bottom and the left.

Create a type level rule for the unordered list for the navigation only. Make it a descendent selector of the navigation – make sure both elements are in the rule, in the correct order – so that the other unordered list is unaffected. Remove the bullets; give the unordered list a width of 900 pixels. Center the navigation but measure the top and bottom margins at 20 pixels. The navigation should have an overall height of 50 pixels.

Create a type selector for the list items that show the same descendant relationship – maintain the navigation and the unordered list in the descendant selector. 150 pixels wide and have them “stack” next to each other to the left. (Chapter 9)

SEE SCREEN 2 at this point.

Create a type selector for the anchor tag. Remove the underline, make the text red, and the size of the font 1.3 times the regular size.

Create an (element) type selector on the anchor tag – pseudoclass of hover
Copy the properties of the anchor tag, EXCEPT, on hover change the color to darkred and make the words italicized.

Create a type rule for the article; add the following properties and values

- 200 pixels wide

- allow them to “sit” next to each other (look at screen)

- increase the font size to 17 pixels

- pad the right by 25 pixels, the left by 10 pixels, top by 2 pixels

- add a margin to the left of 10 pixels

- indent the beginning of the first line of each section by 15px

- make the text align against both sides of the container

Create a class called border-right. Add the property to create a right-sided border, that is 1 pixel, is dashed and is this color: #6c4a2c

Update three of the articles in the HTML with this class (the “correct” three)

Create a class selector named pushdown that has a top margin of 18 pixels

- Apply it to the fourth article element IN THE HTML FILE

FINAL ITEM:

Add the image named yellow_star_large.png to the HTML file after the section.

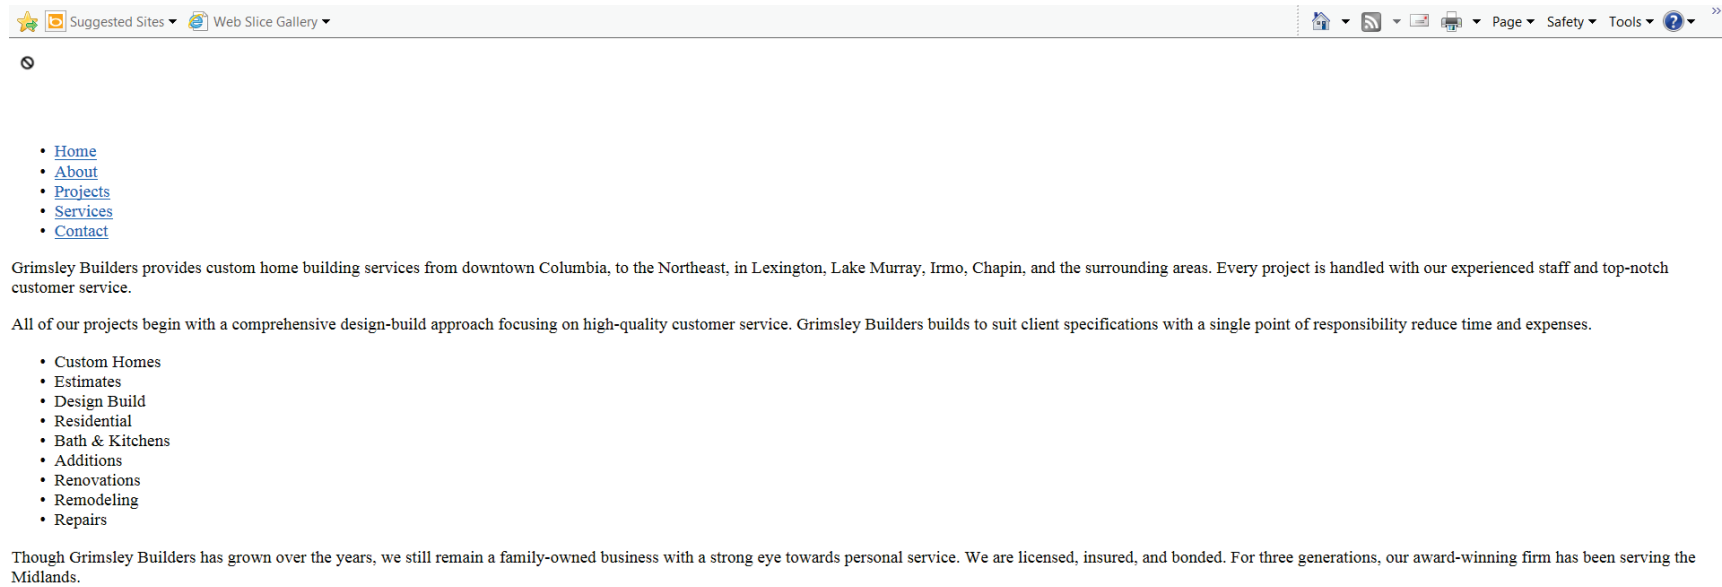

Create a class that can ONLY be used by an image (Chapter Three) that positions the image as seen in the final screen below. Use absolute positioning.

The final project should look like Screen 3.

Zip up all files and subdirectories and email to the instructor by 1pm Friday.

Screen 1:

This is what the HTML looks like before any CSS has been added, or the subdirectories created correctly.

Grimsley Builders

[Home](#) [About](#) [Projects](#) [Services](#) [Contact](#)

Grimsley Builders provides custom home building services from downtown Columbia, to the Northeast, in Lexington, Lake Murray, Irmo, Chapin, and the surrounding areas. Every project is handled with our experienced staff and top-notch customer service.

All of our projects begin with a comprehensive design-build approach focusing on high-quality customer service. Grimsley Builders builds to suit client specifications with a single point of responsibility reduce time and expenses.

- Custom Homes
- Estimates
- Design Build
- Residential
- Bath & Kitchens
- Additions
- Renovations
- Remodeling
- Repairs

Though Grimsley Builders has grown over the years, we still remain a family-owned business with a strong eye towards personal service. We are licensed, insured, and bonded. For three generations, our award-winning firm has been serving the Midlands.
